

PLANETARIUM IN SCHOOL

Science Education Beyond Classroom!!

Dear Parents,

As all of us know, that we are passing through the century of science and technology and we can see big achievements around us. Now days students also wants to explore the Universe and curious to know about the facts of planets, stars, comets and galaxies. We are organizing educational workshops to provide real time amazing experience of universe in our Star Dome.

STAR PLANETARIUM

Planetariums are domed theaters that project images of the starry sky and countless spectacular objects we find in our universe, creating educational experiences that teach astronomy and space sciences. The star projectors that show the night sky itself are among the most durable, versatile, and cost-effective educational tools.

The planetariums can motivate students with its interesting, stimulating learning situation. Surveys have shown that students like astronomy more than other sciences, and the stimulating environment can build on initial interest and help it develop into a lifelong interest.

The children based near to a Planetarium can visit there and get the planetarium experience. But for the children in interior area always miss this experience. So with Mobile planetarium, it is possible to reach to these children and give them the same experience and education that is available in bigger planetarium.

**THANK
YOU**
